

Revolutionizing classroom communication with multimedia alert system in private education

Case study

ST. ANNE'S SCHOOL

Company name:
Saint-Anne private school

Region:
Luxembourg

Industry:
Education

COMPANY BACKGROUND:

Saint-Anne is a prestigious private school in Luxembourg, founded by the Sisters of Christian Doctrine, a congregation dedicated to teaching and education since the 18th century.

CHALLENGE:

Saint-Anne faced the challenge of efficiently delivering different priority and emergency messages to classrooms. The school sought a system to enable the director to send multimedia notifications directly to classrooms, compatible with both Windows and Mac operating systems for fullscreen display.

SOLUTION:

DeskAlerts were chosen as a tool that works across different operating systems and delivers messages with the rich content, such as voice, videos, presentations and images.

Saint-Anne highlighted some features of DeskAlerts as most valuable for their case:

- Ability to send multimedia content
- Ability to send fullscreen notifications
- Ability to pre-record messages

“ We were looking for a software solution, that could fulfill the requirements of a school announcement system. After trying a few solutions, we opted for DeskAlerts.

Victor Gonçalves, IT Department ”

“ DeskAlerts allows the school director to transmit pre-recorded messages (text, audio, video) to the teacher's computer in our classrooms. With an alert appearing on screen, the teacher powers on beamer and speakers and plays the message to the students in his classroom.

Victor Gonçalves, IT Department ”

KEY RESULTS:

Quicker critical alerts

Enhanced student engagement

Streamlined pre-recorded messaging
